DominionAG

Dominion Builders recently launched its new division, DominionAG, which specializes in the planning, design and construction of agricultural growing facilities.

The new division will be led by director of operations Marc Finch and a team of executives with more than 40 years of experience in development and construction, along with expertise in building large-scale greenhouses and hydroponic farms.

“We are proud to launch this new division, which resulted from a demand within the emerging locally grown vegetable and cannabis industries,” said Mark Gemignani, president of Dominion Builders. “DominionAG will offer clients a complete design-build solution that will quickly translate concept to reality.

“DominionAG has a promising future given the cultivation and greenhouse revolution taking place across the country. There is a national surge in consumer demand for locally grown produce, as well as medical marijuana. We have taken a leading position within these rapidly growing supply chains.”

Dominion’s latest project included BrightFarms’ Chicagoland Greenhouse,

a 177,441-square-foot hydroponic farm, located about 80 miles west of Chicago. The greenhouse produces approximately 1 million pounds of pro-

duce per year including baby greens and tomatoes.
